

# Real-time tracking and monitoring for less

## ZenduTracker Z1

### Complete asset tracking now available in ZenduT's Trax platform

The ZenduTracker Z1 tracker is an asset tracking solution that allows fleets to closely monitor their fleet remotely at a price that fits any budget.

The tracker is integrated with the Trax platform so managers can track vehicles, measurements, faults, and accelerometer data in addition to setting rules. Users even have the option to monitor vehicle health and driver behaviour.

- ✓ Lower priced alternative to current tracking solutions on the market
- ✓ Easy-to-install plug-and-play device
- ✓ Access dash camera and vehicle monitoring in the same platform
- ✓ View tracking, measurements, faults and accelerometer data
- ✓ Functional through both the OBD port and any direct 12V power

### Advanced Tracking

Monitor and review driving habits and vehicle health with vehicle playback options.

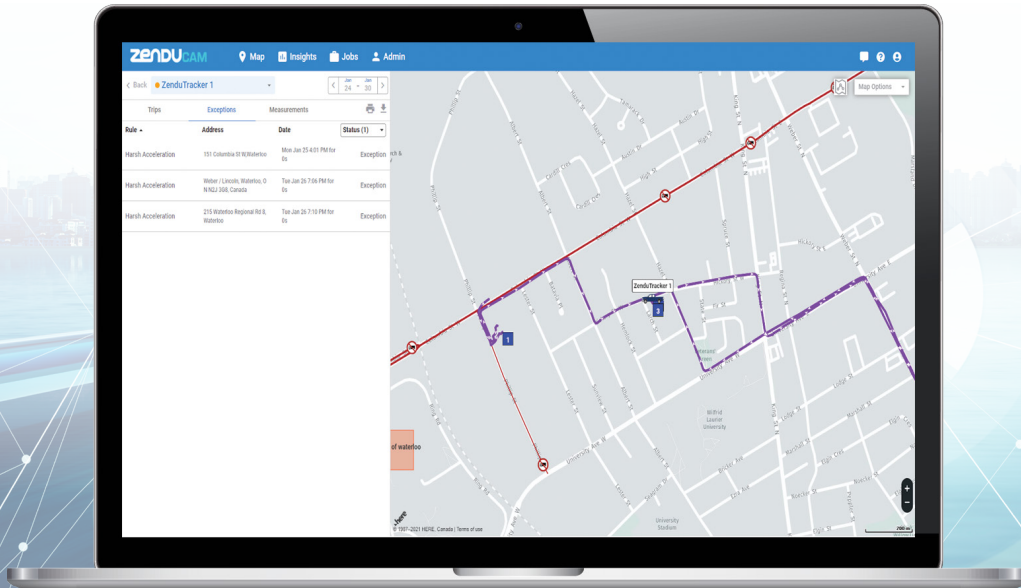

### Set Vehicle Rules

Monitor harsh braking, harsh acceleration, and seat belt compliance remotely.

### Available In Trax

Access data through Trax's subscription platform to work alongside ZenduIT products.

A Tracking Solution That Fits Every Budget.

## Top Three Benefits Of The Z1 Tracker

### Easy To Install

A plug-and-play OBD device that is installed in seconds easily by drivers or managers.

### Comprehensive Vehicle Tracking

Monitor the GPS location of fleet vehicles, engine health, rule exceptions and more.

### Professional Feature Set

ZenduIT-specific features and add-on's available in the Trax platform to align with ZenduCAM use.
